

SELVAGANAPATHI PANDIYARAJAN

(Java Full Stack Developer | 4.5+year Experience | Software Engineer)

8722806289 | selvaganapathip1221@gmail.com | Bangalore | [My Portfolio](#) | [GitHub Profile](#) | [Linked In Profile](#)

Profile Summary

- **Java Full Stack Developer** with 4.5+ years of experience building scalable enterprise applications using **Java 17, Spring Boot, Microservices, and Angular**, delivering high-performance **RESTful and GraphQL APIs**.
- Strong expertise in **event-driven architecture** using **Apache Kafka and Redis**, enhancing system throughput, reducing API latency, and optimizing database performance across **MySQL, MongoDB, and Redis**.
- Experienced in **cloud-native development and DevOps practices**, including **Docker, Kubernetes, Jenkins CI/CD pipelines, and AWS**, ensuring high application availability and enabling efficient deployment cycles.
- Proven ability to develop **responsive UI modules** and **secure backend systems** using **Angular, JWT, and OAuth2**, while collaborating in **Agile/Scrum environments** to deliver reliable, scalable, and secure software solutions.

Technical Skills

- **Frontend:** Angular, JavaScript, TypeScript, HTML, CSS, Bootstrap, React
- **Backend:** Java 8/11/17, Node.js, Express.js, Microservices
- **Frameworks:** Spring MVC, Spring Boot, Spring Data JPA, Spring Security, Spring AI, Spring Batch
- **Web Services & APIs:** REST APIs, GraphQL,
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle
- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, SNS, SQS, API Gateway, Cloud Watch)
- **DevOps & CI/CD:** Docker, Kubernetes, Jenkins, Git pipelines
- **Version Control:** Git, GitHub, GitLab
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, IBM MQ
- **Build Tools:** Maven, Gradle
- **Monitoring & Logging:** Dynatrace, Grafana, Prometheus, ELK Stack
- **Tools & Collaboration:** Postman, JIRA, Confluence
- **AI Tools:** GitHub Copilot, Codium AI
- **Caching & Performance:** Redis

Experience

Altimetrik India Pvt Ltd – Software Engineer
Client : Citi Bank

Aug2025 – Present

Payroll: Profuse Transtech Solutions

Payment Processing Platform : Developed a cloud-native Payment Integration Platform for Citibank that acts as a bridge between corporate clients and the bank's payment systems across multiple regions. The platform receives inbound payment requests, performs schema and business validations, processes payment transactions through event-driven workflows, and sends outbound responses to clients. Built scalable Spring Boot

microservices and Angular-based dashboards to support high-volume payment processing with secure, resilient, and highly available distributed architecture.

Tech Stack: Java 17, Spring Boot, Microservices, REST APIs, Angular, Apache Kafka, PostgreSQL, MongoDB, JPA, Docker, Kubernetes, OpenShift, AWS EC2, Jenkins, Git, Maven, JUnit, Mockito, JIRA, IntelliJ IDEA

Key Responsibilities:

- Designed and developed Spring Boot microservices and REST APIs for payment processing, validation, transaction management, and client integration workflows.
- Built responsive Angular dashboards and integrated frontend components with backend services to provide payment tracking, reporting, and real-time transaction status updates.
- Implemented Apache Kafka-based event-driven architecture for asynchronous payment processing, transaction orchestration, and reliable inter-service communication.
- Designed and optimized PostgreSQL and MongoDB databases, developed JPA repositories, and improved query performance for high-volume transaction processing.

Deployed and maintained containerized applications using Docker, Kubernetes, OpenShift, AWS EC2, and Jenkins CI/CD pipelines while ensuring system scalability, performance, and reliability

HTC Global Services – Software Engineer

Aug 2021 – Jun 2025

Client: StateFarm

(I) Aegis Policy Intelligence Platform: Developed an enterprise-grade insurance policy lifecycle management platform supporting policy onboarding, claims processing, risk scoring, and POS partner integrations. Built scalable microservices using Spring Boot with React-based dashboards and Kafka-driven event pipelines, enabling efficient policy processing and real-time risk analysis.

Tech Stack: Java, Spring Boot, Microservices, REST APIs, React, Kafka, RabbitMQ, Spring Batch, MySQL, MongoDB, Cassandra, Spark, Docker, Jenkins, Prometheus, Grafana

Key Responsibilities:

- Developed Spring Boot microservices and REST APIs for policy management, claims processing, and POS integrations.
- Built React dashboards for claims tracking, risk insights, and policy lifecycle monitoring.
- Implemented Kafka event pipelines for asynchronous processing and risk scoring workflows.
- Automated business processes using Spring Batch and scheduled jobs for policy reminders and claim updates.
- Integrated MongoDB and Cassandra for scalable storage of policy and claim data.
- Built Spark-based pipelines for real-time insurance risk computation and analytics.
- Containerized microservices using Docker and automated deployments with Jenkins CI/CD.
- Implemented Prometheus and Grafana monitoring for service health and performance tracking.
- Secured APIs using JWT authentication and API throttling.

- Developed unit and integration tests using JUnit, Mockito, and Jest to ensure system reliability.

(II) Orion Digital Transaction Gateway: Developed a high-volume digital transaction processing platform supporting real-time banking operations, fraud detection, and cross-border remittance workflows. Built scalable Spring Boot microservices and high-performance APIs, integrated event-driven messaging with Kafka and RabbitMQ, and deployed containerized services on AWS EKS using CI/CD pipelines, achieving 99.95% system uptime and seamless scalability.

Tech Stack: Java, Spring Boot, Microservices, REST APIs, React, Kafka, RabbitMQ, Redis, MongoDB, Elasticsearch, JWT, OAuth2, Docker, Kubernetes, Jenkins, AWS

Key Responsibilities:

- Designed and optimized Spring Boot microservices and REST APIs for high-throughput transaction processing.
- Built React-based dashboards for transaction monitoring and fraud detection.
- Implemented Kafka streams messaging for asynchronous event-driven workflows.
- Secured APIs using JWT authentication for banking-grade security
- Improved system performance using Redis caching and Elasticsearch indexing for faster data retrieval
- Containerized services using Docker and deployed scalable workloads on Kubernetes clusters
- Automated build, test, and deployment pipelines using Jenkins CI/CD
- Monitored system performance using Prometheus and Grafana dashboards.
- Developed unit and integration tests using JUnit, Mockito, Jest, and Karma to ensure application reliability.

Personal Project

- **AI Explorer | Java, Spring Boot, Micro Service, PostgreSQL ,Spring AI ,Gemini, Ollama ,Angular | [Link](#)**
Developed an AI-powered comparison platform using Java, Spring Boot, Spring AI, Angular, PostgreSQL, Redis, and Microservices. Integrated Gemini, Gemma, and Qwen models to provide side-by-side AI responses for text, voice, image, and document inputs. Implemented API Gateway, Eureka Service Discovery, and Redis caching to ensure scalable, high-performance, and real-time AI interactions.
- **Hospital Management | Java, Spring Boot, Micro Service, PostgreSQL ,MySQL ,Spring Batch | [Link](#)**
Developed a API using Spring Boot microservices to manage doctors, patients, appointments, authentication, and payroll operations efficiently and Implemented secure communication and automation using JWT, Rest Template, Feign Client, Kafka, Spring Batch, and Swagger-documented REST APIs.
- **AI-Powered E-Commerce Platform | Angular, Java, Spring Boot, Spring AI,Gemini JPA,PgSQL | [Link](#)**
Developed a full-stack AI-powered e-commerce platform using Angular, Spring Boot, JPA Specifications, and PostgreSQL with features including product search, filtering, sorting, wishlist, and order management. Integrated an AI chatbot using Spring AI and Gemini API to provide personalized product recommendations, conversational product search, wishlist assistance, and seamless order placement through natural language

interactions, enhancing the overall user shopping experience.

- **Timesheet Management System** | Angular, Node.js, Express, PostgreSQL | [Link](#)

Developed an internal timesheet management tool with CRUD operations and reporting dashboards to log employee working hours, track leaves, and streamline project tracking processes.

- **Travel Management** | Angular, Node.js, Mongo DB | [Link](#)

Developed a travel booking application using Angular and Node.js, featuring flight and hotel search with country-based filters, daily price calendars, Leaflet map hotel locations, Razor pay payments, and secure user login.

Education Detail

Bachelor of Engineering – Electrical & Electronics

2015 – 2019 | **CGPA: 7.02**

K.L.N College of Information Technology Sivagangai, Tamil Nadu

Achievements & Certifications

Received **Bravo Award** for Q3 in 2024 | Completed AWS Foundation & Terraform Course on Linked In Learning

Interests

Gardening

Travelling
